

Arsitektur

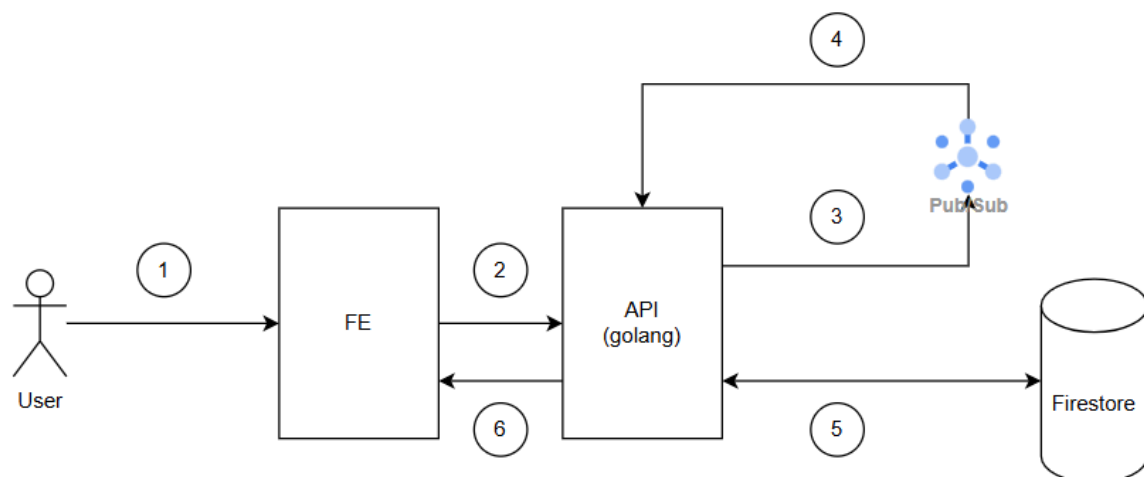

REST

REST API Arch and Flow

1. User create a summary request
2. FE Create HTTP Request to REST API Handler Endpoint
3. SummaryService create query to Firestore, and firestore will send the response
4. The summary handler will send the response to FE

REST & PUB/SUB

Pub Sub Arch and Flow

1. User create a like request to FE
2. FE Create HTTP Request to PubSub Handler Endpoint
3. PubSub Handler will publish a message (event) to Pub/Sub with specific payload

4. PubSub will publish the message to its subscribers
5. The PubSub event handler via likeService will receive the event, parse them and save it to firestore
6. API sends a response to FE
